

n11.com Search Module Load Test Report

Test Objective

To investigate the performance of the search module on <https://www.n11.com/> by simulating a user searching for the keyword 'telefon'.

Tool Used

Apache JMeter 5.4.1

Test Scenario

1. A user opens the n11.com search page.
2. The user searches for the term 'telefon' via the header search bar.
3. The server processes the GET request to: <https://www.n11.com/arama?q=telefon>
4. The test records the response time and HTTP status.

Configuration

- Users: 1
- Ramp-up Period: 1 second
- Loop Count: 1
- Request Method: GET
- Endpoint: <https://www.n11.com/arama?q=telefon>

Expected Result

The search results page should load successfully with HTTP 200 status and a reasonable response time (typically under 1000ms).

JMX File
